Log

Notes

Crescent

4 moons visible

First session at Camp Holly. There is some local light pollution from security lights and pollution. Entire constellation easily viewable. Belt nice and bright. Nebula easy to find, but little detail to

extremely bright. Nice blue tint.

dominated the northern sky. Easiest thing to see through nearby cities sky glow.

Only star in Ursa Minor that was easy to see.

Craters on terminator were impressive

Cloud bands and several moons visible

several moons visible

Campground has lots of local light pollution so only the brighter stars are visible.

Log

1 to the east from the city of Melbourne FL. Viewing to the west, north west and south west are decent. |
naked eye due to light pollution

Log

Friendly to overnight camping if you check with them first. Betelguse bright red.
